

Fundamental Rights Impact Assessment

Regulation: EU 2024/1689 Art. 27 **Generated:** 2026-04-22T12:27:52.286051+00:00 **Status:** draft

Deployer

- **Organisation:** Alpenversicherung AG
- **Contact:** [DEPLOYER: accountable contact person and role]
- **Role:** deployer

Trigger

- **Category:** insurance_pricing
- **Reference:** Risk assessment and pricing for life or health insurance (Annex III §5(c))

1. Process description (Art. 27(1)(a))

- **Agent:** Premium Tier Recommender (external/premium-tier-recommender v1, insurtech)
- **Agent description:** Suggests premium tiers for health-insurance policy renewals based on anonymised claims history and declared lifestyle factors. A human underwriter approves the final tier.
- **Deployer process summary:** At renewal, the system suggests a premium tier band. An underwriter must approve before the tier communicates to the policyholder.

2. Duration and frequency (Art. 27(1)(b))

- **Intended duration:** [DEPLOYER: calendar duration or 'ongoing']
- **Frequency:** Per policy renewal (~4,000/month)
- **Estimated volume per month:** ~4,000 policyholders

3. Affected persons (Art. 27(1)(c))

Primary categories:

- Health insurance policyholders

Vulnerable groups considered:

- Policyholders with chronic conditions
- Elderly policyholders
- Pregnant or post-partum policyholders

Special categories of data (GDPR Art. 9): [DEPLOYER: GDPR Art. 9 data processed, if any]

4. Specific risks of harm (Art. 27(1)(d))

- **Platform risk class:** high

Identified potential harms:

- Disparate pricing on health-adjacent features
- Loss of coverage if upward tier moves are unaffordable
- Chilling effect on claims behaviour
- **Severity assessment:** [DEPLOYER: qualitative severity scoring per identified harm]
- **Likelihood assessment:** [DEPLOYER: qualitative likelihood scoring per identified harm]

5. Human oversight (Art. 27(1)(e))

Platform-provided measures:

- Mandatory approval gate: tasks enter 'awaiting_approval' before execution (Art. 14)
- Immutable event log per execution (Art. 12)
- Ephemeral compute: fresh VM per task, destroyed on completion (Art. 15)
- Signed capability card identifying model, data access, and side effects (Art. 13)
- Machine-readable Art. 50 provenance headers on every output

Deployer-provided measures:

- All upward tier moves require human underwriter approval
- Monthly bias check on approvals across age + condition buckets
- Annual review with external actuarial board
- **Instructions for Use (IFU) version:** capability-card@v1

6. Governance and mitigation (Art. 27(1)(f))

Internal governance:

- [DEPLOYER: escalation path when oversight detects an issue]
- [DEPLOYER: cadence of post-deployment review]
- [DEPLOYER: named role responsible for stopping deployment]
- **Complaint mechanism:** [DEPLOYER: how affected persons contest an outcome; response SLA]
- **Authority reporting (Art. 73):** [DEPLOYER: process for reporting serious incidents to the national MSA (Art. 73)]
- **DPIA reference (Art. 27(4)):** [DEPLOYER: reference to the GDPR DPIA; Art. 27(4) allows DPIA content to cover parts of this FRIA]
